                                                                                                                                                                                                                                                     9
                                                     novel
                                             The present invention provides the protein and coding sequences of nove human and rat type 11 phosphodiesterases (PDE11). These are useful for studying intracellular signal transduction mechanisms, in screening highly selective inhibitors as drugs for treating diseases associated with the enzymes and for the identification or selection of selective inhibitory action against multiple type phosphodiesterases. The present sequence is a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; cyclic nucleotide phosphodiesterase; PDEXV; sexual dysfunction;
cardiovascular disease; gastrointestinal disorder; corpus cavernosum;

The present invention describes the protein and coding sequences of the human cyclic nucleotide phosphodiesterase PDEXV. This enzyme is capable of catalysing the degradation of cyclic nucleotides. The sequences are useful in the treatment of cardiovascular, gastrointestinal, spleen, corpus cavernosum, kidney, liver, skeletal muscle, testis and prostate related disorders, and in the enhancement of the male erectile response and the treatment of female sexual dysfunction. The present sequence is the PDEXV protein.
                                                                                                                                                                                                                                                                                                                                                                                                                               1 MLKQARRPLFRNVLSATQWKKVKITRLVQISGASLAEKQEKHQDFLIQRQTKTKDRRFND

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides the protein and coding sequences of novel human and rat type 11 phosphodiesterases (PDE11). These are useful for studying intracellular signal transduction mechanisms, in screening highly-selective inhibitors as drugs for treating diseases associated with the enzymes and for the identification or selection of selective inhibitory action against multiple type phosphodiesterases. The present
studying intracellular signal transduction mechanisms, in screening highly-selective inhibitors as drugs for treating diseases associated with the enzymes and for the identification or selection of selective inhibitory action against multiple type phosphodiesterases. The present sequence is a protein of the invention.

                                                                                                                                                                                                                       The present invention provides the protein and coding sequences of novel mann and rat type 11 phosphodiesterases (PDEII). These are useful for studying intracellular signal transduction mechanisms, in screening highly-selective inhibitors as drugs for treating diseases associated with the enzymes and for the identification or selection of selective inhibitory action against multiple type phosphodiesterases. The present sequence is a protein of the invention.

The present invention relates to human phosphodiesterase (PDE)-like enzymes and their corresponding polynucleotides. The invention also relates to reagents which regulate PDE-like enzyme activity and reagents which bind to human PDE-like enzyme gene products which can be used to regulate degradation of cGMP. Sequences of the invention are useful for modulating the activity of a PDE-like enzyme in a disease such as urinary incontinence, benign prostate hyperplasia, erectile dysfunction, cancer, diabetes or cardiovascular disorder (e.g. ischemic diseases, myocardial infarction). The present sequence is human PDE-like enzyme.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence encodes a human polypeptide which has phosphodiesterase activity. The phosphodiesterase polypeptide and polynucleotide are used for the treatment and prevention of diabetes, ischemic heart disease, hypertension, nephritis, pancreatitis, ulcers, allergies, asthma, rheumatism, osteoporosis, pain, anxiety, schizophrenia, manic depressive psychosis, Parkinson's disease, dementia, infectious diseases, and malignant tumours.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   5;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to human phosphodiesterase (PDE)-like enzymes and their corresponding polynucleotides. The invention also relates to reagents which regulate PDE-like enzyme activity and reagents which bind to human PDE-like enzyme gene products which can be used to regulate degradation of cGMP. Sequences of the invention are useful for modulating the activity of a PDE-like enzyme in a disease such as urinary incontinence, benign prostate hyperplasia, erectile dysfunction, cancer, diabetes or cardiovascular disorder (e.g. ischaemic diseases, myocardial infarction). The present sequence is human PDE-like enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     137
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           62

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AQLFAASRKEYERSRALLEVVNDLFEEQTDLEKIVKKIMHRAQTLLKCERCSVLLLEDIE 182
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                               detection reagent for detecting 1000 or more for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   capable of detecting 1000 or more genes from brosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       -KTKDRRFNDEI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

polypeptide. Treated an argument of the invention may be described as cytostatic and antianaemic. Polypeptides and polynucleotides of the invention can be used to identify agents that modulate the activity of a transketolase-like enzyme. They are also useful for treating transketolase-like enzyme in they are also useful for treating transketolase-like enzyme disorder such as cancer, anaemia, end-stage renal disease and sensory neuropathy associated with uraemia. Therapeutic agents of the invention are useful for modulating the activity of transketolase-like enzyme in the above mentioned diseases. Polypeptides and polynucleotides os the invention are useful for identifying test compounds which act as agonists or antagonists, for raising specific antibodies, and as a bait protein in a two-hybrid or three-hybrid assay. They are also useful in diagnostic assays for detecting diseases and abnormalities or susceptibility to disease and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       122

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence is a fragment of the human cGMP-binding phosphodiesterase (cGB-PDE), consisting of amino acid residues 1-494. The novel polypeptide can be used for the detection of cGB-PDE and the isolation of its expression control sequences. It can also be used to identify genetic alterations in the cGB-PDE locus associated with diseases. Antibodies specific for cGB-PDE fragments can also be used in detecting and quantifying the amount of cGB-PDE present in samples. (Note: this sequence is not given in the specification but is generated from the defined wild type sequence).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       :| || || |:|::|||||:|:|||||:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence is a fragment of the human cGMP-binding phosphodiesterase (cGB-PDE), consisting of amino acid residues 1-549. The novel polypeptide can be used for the detection of cGB-PDE and the isolation of its expression control sequences. It can also be used to identify genetic alterations in the cGB-PDE locus associated with diseases. Antibodies specific for cGB-PDE fragments can also be used in detecting and quantifying the amount of cGB-PDE present in samples. (Note: this sequence is not given in the specification but is generated from the defined wild type sequence).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                             Human cGMP-binding phosphodiesterase; cGB-PDE; control sequence;

                                                                                                                                                                                                                                                                                                                                                                This sequence represents a human phosphodiesterase V amino acid sequence. The phosphodiesterase V protein, its fragments and salts are useful in the identification of phosphodiesterase V inhibitors for use in the treatment of hypertension, pulmonary hypertension, atherosclerosis, cerebral infarction, allergic rhinitis, kidney failure, diabetic complications, and glaucoma.

```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

This clone was sequenced as part of a high-throughput process to sequence clones from Drosophila Gene Collection 1 (Rubin et al., Science 2000). The sequence has been subjected to integrity checks for sequence accuracy, presence of a polyA tail and contiguity within 100 kb in the genome. Thus we believe the sequence to reflect accurately this particular cDNA clone. However, there are artifacts associated with the generation of cDNA clones that may have not been detected in our initial analyses such as internal
